Current Equipment Type

**TYPE ECF82
MINIATURE
TRIODE PENTODE
FREQUENCY CHANGER**

The BRIMAR ECF82 is a triode-pentode frequency changer featuring a high slope triode and a high input impedance pentode of high slope suitable for use in television receivers for Band III. The high input impedance at 200 Mc/s permits a sensibly constant conversion gain to be obtained over Bands I and III. The low value of C_{ag} for the pentode and C_{ap} , at facilitate the reduction of oscillator radiation. The use of low oscillator grid current to obtain the required heterodyne voltage reduces the frequency drift of the oscillator to a minimum.

Heater Current	0.45 amp.
Heater Voltage	6.3 volts (nom.)
